

CASHFLOW FOOTBALL - RESULTS

(4% STAKE PLAN)

This is a staking plan included that you can work alongside this trading method. This plan was created simply for those that are starting with smaller stakes, so that you can quickly get these to increase and start to make larger profits. By using this, it aims to turn an original £10 starting stake into £100 stakes within around 60 days.

The plan involves increasing your stake by 4% each day regardless of a winning or losing day. With a high strike rate of around 75%, it will make money consistently and the profits will grow day by day.

If you want, after a losing day you can double your stakes until you reach a winning day. This is more profitable again, but it depends on whether or not you're willing to use this form of progressive staking.

For example, if day 1 was a losing day, we'd then double the next day's £10.40 stakes to £20.80. Should that be a losing day, then on day 3 we'd be increasing what would have been our £10.82 stakes to £43.28 etc. The results for this are shown in the summary at the bottom on this document (in brackets)

However, using the 4% plan without doubling up after a loss is incredibly profitable and that is just an additional extra if you want to go in that direction.

Below are the results using this staking plan, with the stakes included for each day. At the bottom of the document is a summary of the results, including the overall profit etc.

Enjoy!

5th June 2011 **STAKE £10**
Flamengo v Corinthians +£6.49

12th June 2011 **STAKE £10.40**
